

This study is opened to Australian residents
with participant reimbursement of AUD150

Volunteers Needed

Researchers at the Greenwich Hospital are conducting a study aiming to show whether a virtual reality application results in reductions in neuropathic pain in people following spinal cord injury

Taking part in the study involves:

- **Filling in some short questionnaires about your pain and how it affects your thoughts and feelings.**
- **Experiencing two types of virtual reality using a headset or a computer screen separated with a one-hour break.**
- **Brain waves will be recorded using non-invasive electroencephalogram (EEG) that are thought to be involved in neuropathic pain**

If you are interested in taking part or would like more information,
please speak to the trial co-ordinator, Phil Austin on

02 8878 3943

This study has been approved by the
Northern Sydney Local Health District Human Research Ethics Committee
